Task 3 - Serverless Function (AWS Lambda)

Endpoint URL: given below

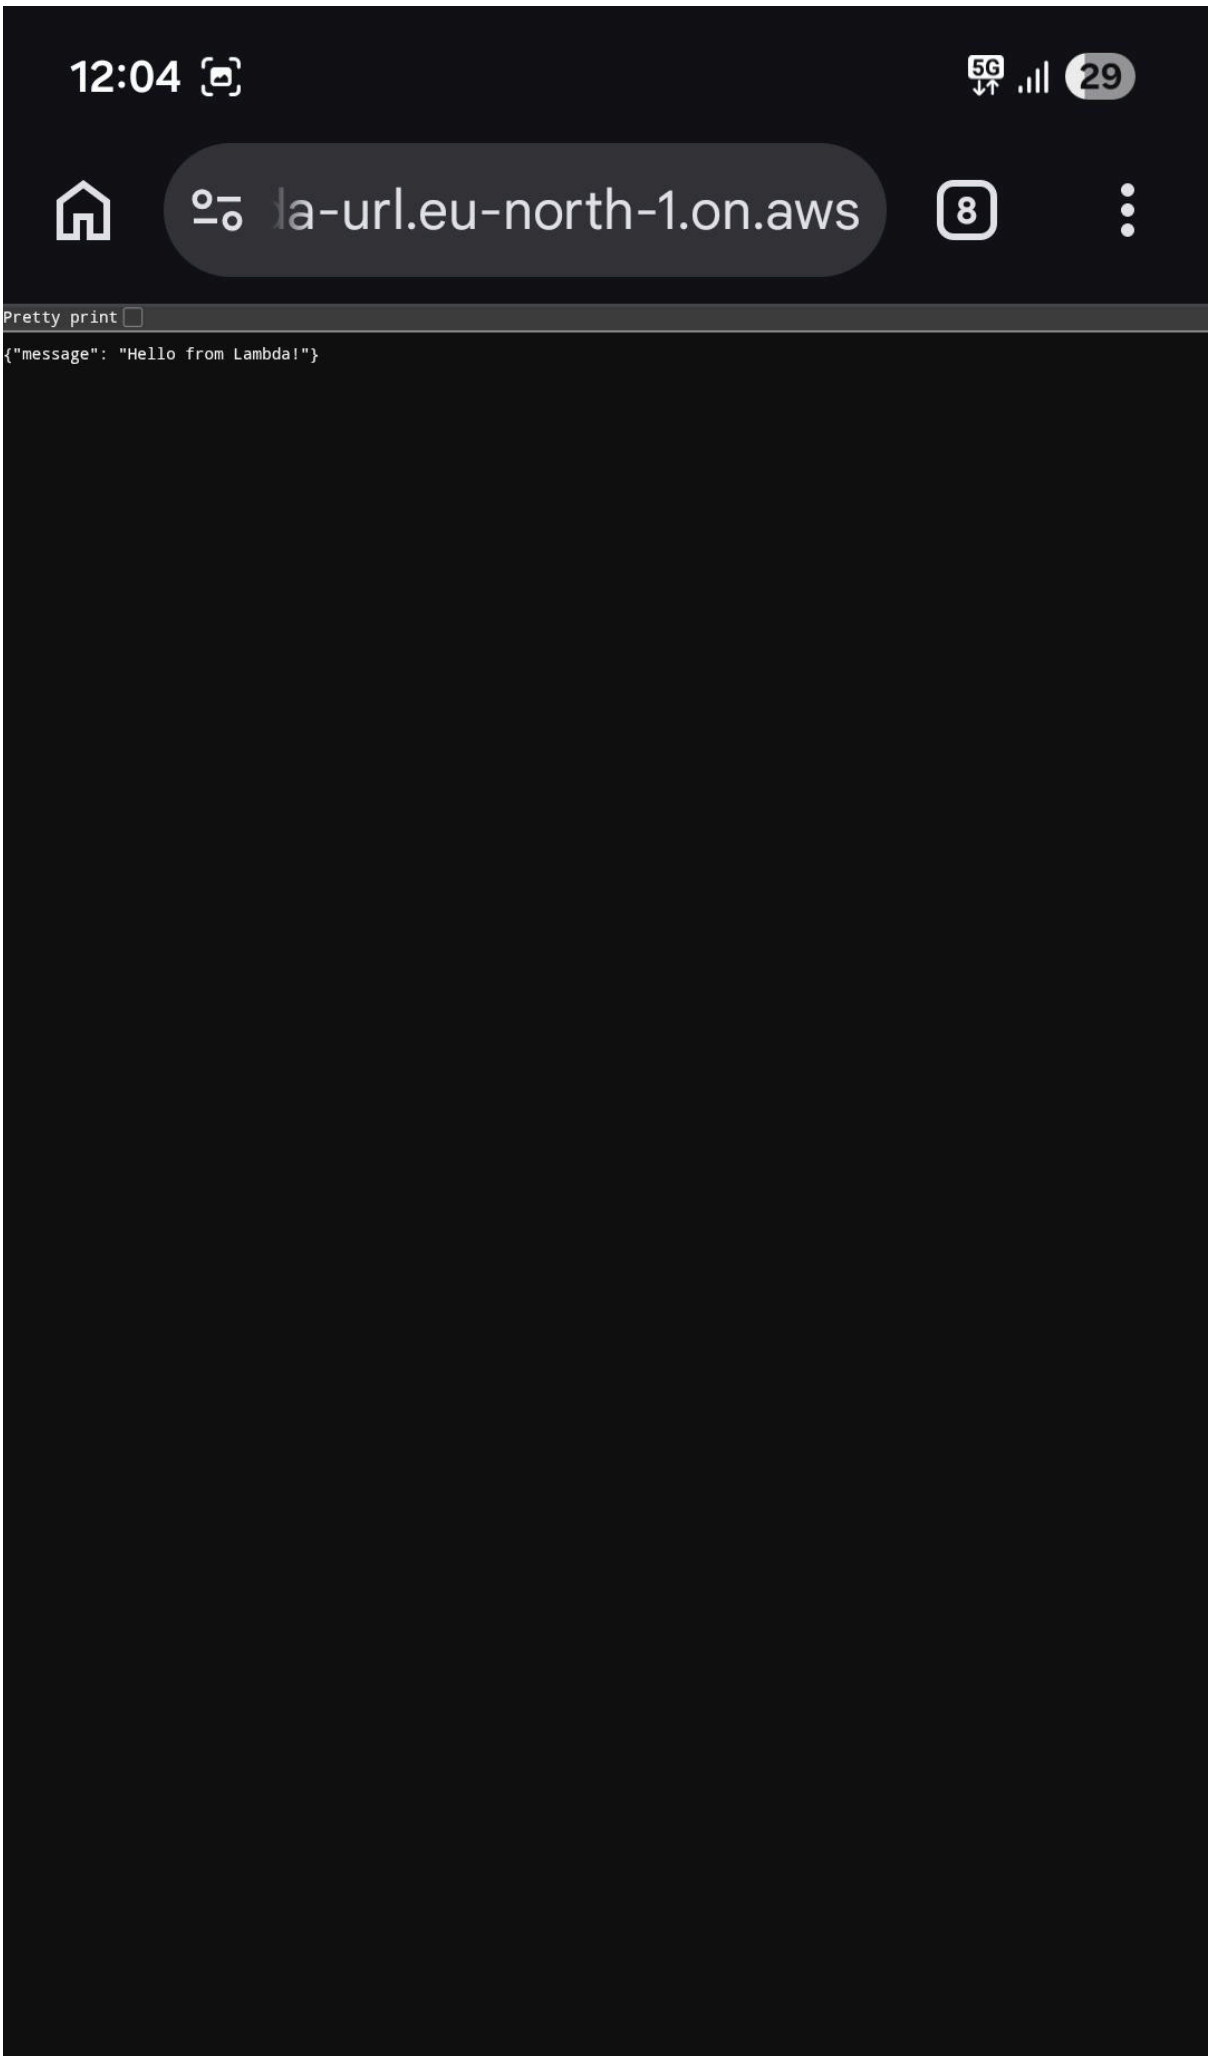
Requirements Completed:
- Created Lambda function using Python 3.12
- Tested via AWS console
- Generated public endpoint via Function URL

Code:
```
import json

def lambda_handler(event, context):
    return {
        "statusCode": 200,
        "body": json.dumps({"message": "Hello from Lambda!"})
    }
```

Endpoint URL:

https://nxwlrkzoxnazcak2tqzzddvnc40thkxy.lambda-url.eu-north-1.on.aws/



12:04
29
la-url.eu-north-1.on.aws
8
Pretty print
{"message": "Hello from Lambda!"}

Test event Info

Delete | CloudWatch Logs Live Tail | Save | Test

To invoke your function without saving an event, modify the event, then choose Test. Lambda uses the modified event to invoke your function, but does not overwrite the original event until you choose Save.

Test event action

- ○ Create new event
- ◉ Edit saved event

Invocation type

- ◉ Synchronous
  Executes the Lambda function and blocks until receiving the function's response, with a maximum timeout of 15 minutes. Returns function output or error details directly to the calling application.
- ○ Asynchronous
  Enqueues the Lambda function for execution and returns immediately with a request ID. Function processes independently, with results optionally sent to a configured destination like SQS, SNS, or EventBridge.

Event name

Newtest

Event JSON

Format JSON

```
1 {
2   "key1": "value1",
3   "key2": "value2",
4   "key3": "value3"
5 }
```
